NOTICES

This Informatica product (the "Software") includes certain drivers (the "DataDirect Drivers") from DataDirect Technologies, an operating company of Progress Software Corporation ("DataDirect") which are subject to the following terms and conditions:

1. THE DATADIRECT DRIVERS ARE PROVIDED "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NON-INFRINGEMENT.
2. IN NO EVENT WILL DATADIRECT OR ITS THIRD PARTY SUPPLIERS BE LIABLE TO THE END-USER CUSTOMER FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES ARISING OUT OF THE USE OF THE ODBC DRIVERS, WHETHER OR NOT INFORMED OF THE POSSIBILITIES OF DAMAGES IN ADVANCE. THESE LIMITATIONS APPLY TO ALL CAUSES OF ACTION, INCLUDING, WITHOUT LIMITATION, BREACH OF CONTRACT, BREACH OF WARRANTY, NEGLIGENCE, STRICT LIABILITY, MISREPRESENTATION AND OTHER TORTS.

Index ............................................................... 50
Preface

The Upgrade Guide for Version 9.0.1 is written for the system administrator who is responsible for upgrading the Informatica product. This guide assumes that you have knowledge of operating systems, relational database concepts, and the database engines, flat files, or mainframe systems in your environment. This guide also assumes that you are familiar with the interface requirements for your supporting applications.

Informatica Resources

Informatica Customer Portal

As an Informatica customer, you can access the Informatica Customer Portal site at http://mysupport.informatica.com. The site contains product information, user group information, newsletters, access to the Informatica customer support case management system (ATLAS), the Informatica How-To Library, the Informatica Knowledge Base, the Informatica Multimedia Knowledge Base, Informatica Product Documentation, and access to the Informatica user community.

Informatica Documentation

The Informatica Documentation team takes every effort to create accurate, usable documentation. If you have questions, comments, or ideas about this documentation, contact the Informatica Documentation team through email at infa_documentation@informatica.com. We will use your feedback to improve our documentation. Let us know if we can contact you regarding your comments.

The Documentation team updates documentation as needed. To get the latest documentation for your product, navigate to Product Documentation from http://mysupport.informatica.com.

Informatica Web Site

You can access the Informatica corporate web site at http://www.informatica.com. The site contains information about Informatica, its background, upcoming events, and sales offices. You will also find product and partner information. The services area of the site includes important information about technical support, training and education, and implementation services.

Informatica How-To Library

As an Informatica customer, you can access the Informatica How-To Library at http://mysupport.informatica.com. The How-To Library is a collection of resources to help you learn more about Informatica products and features. It includes articles and interactive demonstrations that provide solutions to common problems, compare features and behaviors, and guide you through performing specific real-world tasks.
Informatica Knowledge Base

As an Informatica customer, you can access the Informatica Knowledge Base at http://mysupport.informatica.com. Use the Knowledge Base to search for documented solutions to known technical issues about Informatica products. You can also find answers to frequently asked questions, technical white papers, and technical tips. If you have questions, comments, or ideas about the Knowledge Base, contact the Informatica Knowledge Base team through email at KB_Feedback@informatica.com.

Informatica Multimedia Knowledge Base

As an Informatica customer, you can access the Informatica Multimedia Knowledge Base at http://mysupport.informatica.com. The Multimedia Knowledge Base is a collection of instructional multimedia files that help you learn about common concepts and guide you through performing specific tasks. If you have questions, comments, or ideas about the Multimedia Knowledge Base, contact the Informatica Knowledge Base team through email at KB_Feedback@informatica.com.

Informatica Global Customer Support

You can contact a Customer Support Center by telephone or through the Online Support. Online Support requires a user name and password. You can request a user name and password at http://mysupport.informatica.com.

Use the following telephone numbers to contact Informatica Global Customer Support:

CHAPTER 1

Upgrade Overview

This chapter includes the following topics:

- Informatica Upgrade, 1
- Upgrade Process, 2
- Upgrade Tasks, 3

Informatica Upgrade

You can upgrade the following Informatica product versions to version 9.1.0 HotFix 2:

<table>
<thead>
<tr>
<th>Informatica Product Version</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Informatica PowerCenter 8.1.x</td>
<td>If the PowerCenter 8.1.x domain includes Metadata Manager or Data Analyzer, you must first upgrade to PowerCenter 8.6.1.</td>
</tr>
<tr>
<td>Informatica PowerCenter 8.5.x</td>
<td>If the PowerCenter 8.5.x domain includes the Metadata Manager Service or Reporting Service, you must first upgrade to PowerCenter 8.6.1.</td>
</tr>
<tr>
<td>Informatica PowerCenter 8.6</td>
<td>If the PowerCenter 8.6 domain includes the Metadata Manager Service, Reporting Service, or Reference Table Manager Service, you must first upgrade to PowerCenter 8.6.1.</td>
</tr>
<tr>
<td>Informatica PowerCenter 8.6.1</td>
<td>Effective in version 9.0.1, the Reference Table Manager functionality is available through the 9.0.1 Analyst Service. See the PowerCenter 8.6.1 upgrade documentation for the steps to migrate the PowerCenter 8.6.1 reference table data to the Informatica 9.0.1 Analyst tool.</td>
</tr>
<tr>
<td>Informatica Data Quality 8.6.2</td>
<td>You can migrate the contents of the Informatica Data Quality 8.6.2 repository to the Informatica 9.0.1 Model repository. See the 9.0.1 Data Quality migration documentation for details.</td>
</tr>
<tr>
<td>Informatica Data Explorer Advanced Edition 9.0</td>
<td>You must first upgrade to Data Explorer Advanced Edition 9.0.1. See the Informatica Data Quality 9.0 upgrade documentation. Complete the steps to upgrade Informatica Data Quality 9.0 unless an exception is specified.</td>
</tr>
<tr>
<td>Informatica Data Quality 9.0</td>
<td>You must first upgrade to Data Quality 9.0.1.</td>
</tr>
</tbody>
</table>
Upgrade Process

The upgrade consists of the following phases:

- Upgrading the domain and server files. To upgrade the domain and server files, run the Informatica server installer and select the upgrade option. The domain upgrade wizard installs the server files and configures the domain. If the domain has multiple nodes, you must upgrade all nodes.

The following table describes the actions that the installer performs when you upgrade Informatica:

<table>
<thead>
<tr>
<th>Tasks</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Installs Informatica.</td>
<td>Installs Informatica directories and files into the new directory.</td>
</tr>
<tr>
<td>Copies infa_shared directory.</td>
<td>Copies the contents of the infa_shared directory from the existing installation directory into the new installation directory.</td>
</tr>
<tr>
<td>Copies mm_files directory.</td>
<td>Copies the contents of the mm_files directory from the default location in the existing installation directory into the new installation directory.</td>
</tr>
<tr>
<td>Upgrades the domain.</td>
<td>Upgrades the domain to run version 9.1.0 application services.</td>
</tr>
<tr>
<td>Tasks</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>The upgrade retains the user and administrator accounts in the domain.</td>
<td></td>
</tr>
<tr>
<td>Starts Informatica Services.</td>
<td>Starts Informatica Services on the node.</td>
</tr>
</tbody>
</table>

- Upgrading the application services. After you upgrade the domain and server files, log in to the Administrator tool and upgrade the application services. The service upgrade wizard provides a list of all application services that must be upgraded. It upgrades the services based on the order required by the dependent objects.
- Upgrading the Informatica client. To upgrade the Informatica client, run the Informatica client installer and select the upgrade option. If the client is installed on multiple machines, upgrade the client on all machines.

### Changing the Node Configuration

The installer provides the option to allow changes to node host name and port number. When you select this option you can change the node configuration. Change the node configuration when you move the Informatica installation to a different machine.

If you choose the option to update the node configuration on one gateway node, you must use this option on all gateway nodes in the domain.

If you choose the option to update the node configuration, you need to perform additional upgrade steps. There are additional steps before you upgrade the domain and server files, and before you upgrade the application services.

### Upgrading Data Transformation

If you want to upgrade Data Transformation Engine and Data Transformation Studio on the same machine, upgrade the client before you upgrade the domain and server files. The client and server upgrades must be 32-bit.

### Upgrade Tasks

To upgrade PowerCenter, complete the following tasks:

1. Complete the pre-upgrade tasks for the domain and server files to ensure that you can successfully run the installer.
2. Upgrade the Informatica domain and server files. Use the server installer to upgrade Informatica domain and upgrade the server files on each node. If the domain contains multiple nodes, upgrade the gateway node before you upgrade the worker nodes. After you upgrade the first gateway node, verify that the upgrade was successful before you upgrade the other nodes in the domain.
3. Complete the pre-upgrade tasks for the application services.
4. Upgrade the application services. After installation, log in to the Administrator tool and upgrade the application services.
5. Upgrade the PowerCenter Client. Use the client installer to upgrade the PowerCenter Client.
6. Perform the post-upgrade tasks.
Before You Upgrade the Domain and Server Files

This chapter includes the following topics:

- Pre-Upgrade Tasks, 4
- Review the Windows Requirements, 5
- Review the UNIX Requirements, 7
- Uninstall Data Transformation, 10
- Prepare the Domain, 11
- Prepare the PowerCenter Repository, 13
- Prepare Metadata Manager, 13
- Prepare Data Analyzer, 13
- Shut Down the Domain, 14
- Prepare to Change the Node Configuration, 14

Pre-Upgrade Tasks

Before you upgrade the domain and server files, complete the following tasks:

1. Review the operating system specific requirements.
3. Prepare the domain.
4. Prepare the PowerCenter repository.
5. Prepare Metadata Manager.
6. Prepare the Data Analyzer repository.
7. Shut down the domain.
8. Prepare to change the node configuration.
Review the Windows Requirements

Before you upgrade the domain, review the following Windows requirements:

1. Review the prerequisites.
2. Review the environment variables.

Review the Prerequisites

Verify that your system meets the upgrade requirements.

The following table lists the minimum system requirements for a domain with different node configurations:

<table>
<thead>
<tr>
<th>Component</th>
<th>Processor</th>
<th>RAM</th>
<th>Disk Space</th>
</tr>
</thead>
<tbody>
<tr>
<td>Domain with all Data Quality, Data Services, and PowerCenter services running on one node</td>
<td>4 CPU</td>
<td>8 GB</td>
<td>20 GB</td>
</tr>
<tr>
<td>Domain with all PowerCenter services running on one node</td>
<td>2 CPU</td>
<td>4 GB</td>
<td>4 GB</td>
</tr>
<tr>
<td>Domain with all PowerCenter services running on one node except Metadata Manager Service and Reporting Service</td>
<td>1 CPU</td>
<td>2 GB</td>
<td>3 GB</td>
</tr>
<tr>
<td>Metadata Manager Service running on a separate node</td>
<td>2 CPU</td>
<td>2 GB</td>
<td>3 GB</td>
</tr>
<tr>
<td>Reporting Service running on a separate node</td>
<td>1 CPU</td>
<td>512 MB</td>
<td>3 GB</td>
</tr>
<tr>
<td>Metadata Manager Agent</td>
<td>1 CPU</td>
<td>512 MB</td>
<td>220 MB</td>
</tr>
</tbody>
</table>

**Note:** When you upgrade, the installer requires an additional 4 GB disk space plus the amount of disk space used by the existing infa_shared directory.

The following table lists the minimum system requirements to run PowerCenter Client:

<table>
<thead>
<tr>
<th>Client</th>
<th>Processor</th>
<th>RAM</th>
<th>Disk Space</th>
</tr>
</thead>
<tbody>
<tr>
<td>PowerCenter Client</td>
<td>1 CPU</td>
<td>512 MB</td>
<td>1.2 GB</td>
</tr>
</tbody>
</table>

For more information about Informatica platform support, see the Product Availability Matrix at https://communities.informatica.com/community/my-support/tools/product-availability-matrices.

Temporary Disk Space Requirements for Installation

The installer writes temporary files to the hard disk. Verify that you have enough available disk space on the machine to support the installation. When the installation completes, the installer deletes the temporary files and releases the disk space.
The following table lists the temporary disk space requirements during installation of Informatica services:

<table>
<thead>
<tr>
<th>Product</th>
<th>Disk Space</th>
</tr>
</thead>
<tbody>
<tr>
<td>Installer</td>
<td>1 GB</td>
</tr>
<tr>
<td>Informatica Services</td>
<td>605 MB</td>
</tr>
</tbody>
</table>

The following table lists the temporary disk space requirements during installation of Informatica clients:

<table>
<thead>
<tr>
<th>Product</th>
<th>Disk Space</th>
</tr>
</thead>
<tbody>
<tr>
<td>Installer</td>
<td>1 GB</td>
</tr>
<tr>
<td>Informatica Clients</td>
<td>550 MB</td>
</tr>
</tbody>
</table>

**Review the Environment Variables**

Configure the environment variables to work with the Informatica installation.

The following table describes environment variables to review on Windows:

<table>
<thead>
<tr>
<th>Variable</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IATEMPDIR</td>
<td>Location of the temporary files created during installation. Informatica requires 1 GB disk space for temporary files. Configure the environment variable if you do not want to create temporary files in the default drive.</td>
</tr>
<tr>
<td>PATH</td>
<td>Verify that the PATH environment variables do not contain earlier versions of Informatica.</td>
</tr>
<tr>
<td>Library path</td>
<td>Verify that the library path environment variables do not contain earlier versions of Informatica.</td>
</tr>
<tr>
<td>INFA_HOME</td>
<td>Contains the location of the Informatica installation directory. Clear this variable before you start the upgrade.</td>
</tr>
<tr>
<td>INFA_DOMAINS_FILE</td>
<td>Contains the location of the domains.infa file. Clear this variable before you start the upgrade.</td>
</tr>
</tbody>
</table>

**Review the Maximum Heap Size**

Verify that Informatica Services uses the required maximum heap size for the number of users in the domain.
The following table lists the minimum requirement for the maximum heap size settings, based on the number of users and services in the domain:

<table>
<thead>
<tr>
<th>Number of Domain Users</th>
<th>Maximum Heap Size (1-5 Services)</th>
<th>Maximum Heap Size (6-10 Services)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1,000 or less</td>
<td>512 MB (default)</td>
<td>1024 MB</td>
</tr>
<tr>
<td>5,000</td>
<td>2048 MB</td>
<td>3072 MB</td>
</tr>
<tr>
<td>10,000</td>
<td>3072 MB</td>
<td>5120 MB</td>
</tr>
<tr>
<td>20,000</td>
<td>5120 MB</td>
<td>6144 MB</td>
</tr>
<tr>
<td>30,000</td>
<td>5120 MB</td>
<td>6144 MB</td>
</tr>
</tbody>
</table>

**Note:** The maximum heap size settings in the table are based on the number of PowerCenter Repository Services in the domain.

If the domain has more than 1,000 users, update the maximum heap size based on the number of users in the domain.

1. Extract the installation files.
2. Go to the following directory: `<installer>`
3. Use a text editor to open the `inservice.bat` file.
4. Search for the following text: `INFA_JAVA_OPTS=-Xmx`. 
5. Set the value for `-Xmx` to the maximum heap size required for the number of Informatica domain users.
   For example, to set the maximum heap size to 3072 MB, use the following configuration:
   ```
   set INFA_JAVA_OPTS=-Xmx3072m
   ```

---

**Review the UNIX Requirements**

Before you upgrade the domain, review the following UNIX requirements:

1. Review the prerequisites.
2. Review the environment variables.
3. Verify the file descriptor settings.
4. Set up the X Windows server.
Review the Prerequisites

The following table lists the minimum system requirements for a domain with different node configurations:

<table>
<thead>
<tr>
<th>Component</th>
<th>Processor</th>
<th>RAM</th>
<th>Disk Space</th>
</tr>
</thead>
<tbody>
<tr>
<td>Domain with all Data Quality, Data Services, and PowerCenter services running on one node</td>
<td>4 CPU</td>
<td>8 GB</td>
<td>20 GB</td>
</tr>
<tr>
<td>Domain with all PowerCenter services running on one node</td>
<td>2 CPU</td>
<td>4 GB</td>
<td>4 GB</td>
</tr>
<tr>
<td>Domain with all PowerCenter services running on one node except Metadata Manager Service and Reporting Service</td>
<td>1 CPU</td>
<td>2 GB</td>
<td>3 GB</td>
</tr>
<tr>
<td>Metadata Manager Service running on a separate node</td>
<td>2 CPU</td>
<td>2 GB</td>
<td>3 GB</td>
</tr>
<tr>
<td>Reporting Service running on a separate node</td>
<td>1 CPU</td>
<td>512 MB</td>
<td>3 GB</td>
</tr>
</tbody>
</table>

Note: When you upgrade, the installer requires an additional 4 GB disk space plus the amount of disk space used by the existing infa_shared directory.

For more information about Informatica platform support, see the Product Availability Matrix at https://communities.informatica.com/community/my-support/tools/product-availability-matrices.

Temporary Disk Space Requirements for Installation

The installer writes temporary files to the hard disk. Verify that you have enough available disk space on the machine to support the installation. When the installation completes, the installer deletes the temporary files and releases the disk space.

The following table lists the temporary disk space requirements during installation:

<table>
<thead>
<tr>
<th>Product</th>
<th>Disk Space</th>
</tr>
</thead>
<tbody>
<tr>
<td>Installer</td>
<td>1 GB</td>
</tr>
<tr>
<td>Informatica Services</td>
<td>605 MB</td>
</tr>
</tbody>
</table>

Review the Environment Variables

Configure the environment variables to work with the Informatica installation.

Create the environment variables with the system user account that you will use for installation. Log in with the account that you plan to use to install Informatica, and then set the environment variables.

The following table describes environment variables to review on UNIX:

<table>
<thead>
<tr>
<th>Variable</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IATEMPDIR</td>
<td>Location of the temporary files created during installation. Informatica requires 1 GB disk space for temporary files.</td>
</tr>
<tr>
<td>Variable</td>
<td>Description</td>
</tr>
<tr>
<td>---------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Configure the environment variable if you do not want to create temporary files in the /tmp directory.</td>
<td></td>
</tr>
<tr>
<td>Verify that the PATH environment variables do not contain earlier versions of Informatica.</td>
<td></td>
</tr>
<tr>
<td>Verify that the library path environment variables do not contain earlier versions of Informatica.</td>
<td></td>
</tr>
<tr>
<td>If you install the Informatica services on a machine with 32-bit or 64-bit SUSE Linux or Linux EMT64 operating system, clear the JRE_HOME environment variable before you start the installation.</td>
<td></td>
</tr>
</tbody>
</table>
| Use LANG and LC_ALL to set the UNIX code page for the installer. Set the LANG and LC_ALL environment variables to the following values for the language that you use:  
  - English: C  
  - Japanese: ja_JP.SJIS or ja_JP.PCK  
  - Portuguese: pt_BR.ISO8859-1, pt_BR.8859-15, or pt_BR  
  After you install, update the locale setting to one that is compatible with the code page of the repository. |
| Contains the location of the Informatica installation directory. Clear this variable before you start the upgrade. |
| Contains the location of the domains.infa file. Clear this variable before you start the upgrade. |

### Verify the File Descriptor Settings

Verify that the operating system meets the file descriptor requirement.

Informatica service processes can use a large number of files. Set the file descriptor limit per process to 4500 or higher.

### Review the Maximum Heap Size

Verify that Informatica Services uses the required maximum heap size for the number of users in the domain.

The following table lists the minimum requirement for the maximum heap size settings, based on the number of users and services in the domain:

<table>
<thead>
<tr>
<th>Number of Domain Users</th>
<th>Maximum Heap Size (1-5 Services)</th>
<th>Maximum Heap Size (6-10 Services)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1,000 or less</td>
<td>512 MB (default)</td>
<td>1024 MB</td>
</tr>
<tr>
<td>5,000</td>
<td>2048 MB</td>
<td>3072 MB</td>
</tr>
<tr>
<td>10,000</td>
<td>3072 MB</td>
<td>5120 MB</td>
</tr>
<tr>
<td>20,000</td>
<td>5120 MB</td>
<td>6144 MB</td>
</tr>
<tr>
<td>30,000</td>
<td>5120 MB</td>
<td>6144 MB</td>
</tr>
</tbody>
</table>
Note: The maximum heap size settings in the table are based on the number of PowerCenter Repository Services in the domain.

If the domain has more than 1,000 users, update the maximum heap size based on the number of users in the domain.

1. Extract the installation files.
2. Go to the following directory: `<installer>\source\tomcat\bin`.
3. Use a text editor to open the `infaservice.bat` file.
4. Search for the following text: `INFA_JAVA_OPTS=-XX:GCTimerRatio=9 -Xmx3072m`
5. Set the value for `-Xmx` to the maximum heap size required for the number of Informatica domain users. For example, to set the maximum heap size to 3072 MB, use the following configuration:

```
set INFA_JAVA_OPTS=-XX:GCTimerRatio=9 -Xmx3072m
```

### Set Up the X Window Server

When you run the Informatica installer in graphical mode, you must use a graphics display server. On UNIX, the graphics display server is typically an X Window server. If you do not have the X Window server installed on the machine where you want to install Informatica, you can install Informatica using an X Window server installed on another machine. Use the `DISPLAY` variable to redirect output of the X Window server to another UNIX machine.

The following table lists the commands to set the `DISPLAY` environment variable:

<table>
<thead>
<tr>
<th>Shell</th>
<th>Command</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>C</td>
<td><code>setenv DISPLAY &lt;TCP/IP node of XWindow server&gt;:0</code></td>
<td><code>setenv DISPLAY 10.1.50.23:0</code></td>
</tr>
<tr>
<td>Bash/Korn</td>
<td><code>export DISPLAY=&quot;&lt;TCP/IP node of XWindow server&gt;:0&quot;</code></td>
<td><code>export DISPLAY=&quot;10.1.50.23:0&quot;</code></td>
</tr>
<tr>
<td>Bourne</td>
<td><code>DISPLAY=&quot;&lt;TCP/IP node of XWindow server&gt;:0&quot; export display</code></td>
<td><code>DISPLAY=&quot;10.1.50.23:0&quot; export display</code></td>
</tr>
</tbody>
</table>

If you do not know the IP address of a UNIX machine where the X Window server is installed, ask your network administrator. For more information about redirecting the `DISPLAY` variable, see the documentation from the UNIX vendor.

If the X Window server does not support the font that the Informatica installer uses, the installer can display incorrect labels on the buttons. For example, the button labeled `Test Connection` can appear as `Test Connecti...`

### Uninstall Data Transformation

If your machine has a previous version of Data Transformation, you must uninstall it before you upgrade Informatica services or clients:

- Back up essential files on your design and production environments.
- Uninstall the previous version of Data Transformation.
Back Up Essential Files

Before you install a new version of Data Transformation, you must back up the following essential files that were created under previous versions:

<table>
<thead>
<tr>
<th>Directory</th>
<th>Default Location</th>
</tr>
</thead>
<tbody>
<tr>
<td>Workspace</td>
<td>C:\Documents and Settings&lt;user&gt;\My Documents\Informatica\DataTransformation&lt;version_number&gt;\workspace (design environment only)</td>
</tr>
<tr>
<td>Repository</td>
<td>&lt;INSTALL_DIR&gt;/DataTransformation/ServiceDB</td>
</tr>
<tr>
<td>Custom Global Components directory (TGP files)</td>
<td>&lt;INSTALL_DIR&gt;/DataTransformation/autoInclude/user</td>
</tr>
<tr>
<td>Custom Global Components directory (DLL and JAR files)</td>
<td>&lt;INSTALL_DIR&gt;/DataTransformation/externLibs/user</td>
</tr>
<tr>
<td>Configuration file</td>
<td>&lt;INSTALL_DIR&gt;/DataTransformation/CMConfig.xml</td>
</tr>
<tr>
<td>License file</td>
<td>&lt;INSTALL_DIR&gt;/DataTransformation/CDELicence.cfg</td>
</tr>
</tbody>
</table>

Uninstalling Previous Version of Data Transformation

The installer cannot upgrade Data Transformation directly from version 9.0.1.1 or earlier.

If you have Data Transformation version 9.0.1.1 or earlier, you must uninstall it before you install the current version.

If you have 32-bit Data Transformation, you must uninstall it before you migrate to 64-bit Data Transformation.

1. Close all applications that use Data Transformation services.
2. If you are uninstalling version 4.x, uninstall all libraries.
3. Uninstall Data Transformation.

   For more information about uninstalling version 9.1.0, see Uninstalling Data Transformation. For more information about uninstalling previous versions, see the Data Transformation Administrator Guide for your version.

Prepare the Domain

Before you upgrade the domain, complete the steps to back up the domain.

Back Up the Domain

Before you upgrade the domain, you must back up the domain.

Complete the following steps to back up the domain:

- Run the infasetup BackupDomain command to back up the domain configuration repository to a file.
• Back up the metadata configuration files to any directory accessible by the machines where you install Informatica.

Informatica infasetup includes command line programs to back up and restore the domain. infasetup is located in the following directory:

```
<Informatica Installation Directory>\server
```

To back up the domain with infasetup, use the following syntax:

```
BackupDomain
<<DatabaseAddress>-da database_hostname:database_port>
<<DatabaseConnectionString>-cs database_connection_string>
<<DatabaseUserName>-du database_user_name
<<DatabasePassword>-dp database_password
<<DatabaseType>-dt database_type
[<<DatabaseServiceName>-ds database_service_name]
<<BackupFile>-bf backup_file_name
[<<Force>-f]
<<DomainName>-dn domain_name
[<<SchemaName>-sc schema_name Microsoft SQL Server only]
```

Back up the metadata configuration files to any directory accessible by the machines where you install Informatica. The following table describes the metadata files and the locations where you can find them:

<table>
<thead>
<tr>
<th>Metadata File</th>
<th>Description</th>
<th>Location</th>
</tr>
</thead>
<tbody>
<tr>
<td>nodemeta.xml</td>
<td>Contains metadata for a node.</td>
<td>Stored in the isp/config directory on each node in the domain. If you use the same backup directory name on all the nodes, rename nodemeta.xml before copying it to the backup location. For example, you back up nodemeta.xml to the /nodebak directory on nodeA and nodeB. Rename the configuration files so that on nodeA the file is backed up to /nodebak/nodemeta_A.xml, and on nodeB the file is backed up to /nodebak/nodemeta_B.xml.</td>
</tr>
<tr>
<td>domains.infa</td>
<td>Contains connectivity information for the gateway nodes.</td>
<td>Stored in one of the following locations:</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- The Informatica installation directory on the client and server machines.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>- The location configured through the INF4_DOMAINS_FILE environment variable.</td>
</tr>
</tbody>
</table>
Prepare the PowerCenter Repository

Before you upgrade the domain, back up the PowerCenter Repository.

To back up a PowerCenter repository, select the service in the Administrator tool and on the Domain actions menu select Repository Contents > Back Up.

Prepare Metadata Manager

Before you upgrade the domain, prepare Metadata Manager.

1. Update and Back Up the Metadata Manager properties file.

2. Back up the Metadata Manager warehouse.

Update and Back Up the Metadata Manager Properties File

Before you upgrade the domain, update and back up the Metadata Manager properties file.

The 9.0.1 version of the imm.properties file is in the following directory:

<9.0.1 InformaticaInstallationDir>\tomcat\shared\class

Remove the following properties from the imm.properties file:

- mail.host
- mail.port

Back up the imm.properties file.

Back Up the Metadata Manager Warehouse

Before you upgrade the domain, back up the Metadata Manager warehouse.

Use the native database backup option and the Metadata Manager backupCmdLine to back up the Metadata Manager warehouse.

Metadata Manager backupCmdLine includes command line programs to backup and restore the Metadata Manager warehouse. The backupCmdLine is in the following directory:

<InformaticaInstallationDir>\server\MM_Utilities\mmBackupUtil

To back up the Metadata Manager warehouse with the backupCmdLine command line program, use the following syntax:

backupCmdLine.(bat | sh) backup <DBTYPE> "<JDBCConnectionString>" <DBUSERNAME> <DBPASSWORD>
<FILENAME.bkp>

Prepare Data Analyzer

Before you upgrade the domain, prepare the Data Analyzer repository.

1. Assign roles to users and groups.
2. Back up the Data Analyzer repository.

Assign Roles to Users and Groups

Create roles for Reporting Service privileges and assign the roles to users and groups. If you do not use roles to assign Reporting Service privileges, users and groups lose privilege assignments after you upgrade.

Back Up the Repository

Back up each Data Analyzer repository.

To back up each Data Analyzer repository, select the service in the Administrator tool. Then, on the Domain Actions menu, click Repository Contents > Backup.

Shut Down the Domain

You must shut down the domain before you upgrade it.

To shut down the domain, stop the Informatica service process on each node in the domain.

You can stop the Informatica service process on each node using one of the following methods:

- To stop Informatica from the Windows Start menu, click Programs > Informatica[Version] > Server > Stop Informatica Services.
- To stop Informatica on UNIX, you use the infaservice command. By default, the infaservice executable file is installed in the following directory:

  `<InformaticaInstallationDir>/tomcat/bin`

Enter the following command to stop the daemon:

  infaservice shutdown

You can also stop the Informatica service from the Windows control panel or from the Administrator tool.

Prepare to Change the Node Configuration

Before you change the node configuration, complete the following steps on the machine where you want the new version of Informatica to run:

1. Review the operating system specific requirements.
2. Copy the installation directory.
3. Verify the keystore file name and location.

Configure the Windows Machine

Before you upgrade the domain and server files, complete the following Windows tasks:

1. Determine port availability.
2. Create a system user account.

**Note:** Services may fail to start if there is a port number conflict.
Determine Port Availability

The installer sets up the ports for components in the Informatica domain, and it designates the ports to use for application service processes that run on the node where you install Informatica.

You can specify the port numbers to use for the components and a range of port numbers to use for the application services. Or you can use the default port numbers provided by the installer. Verify that the port numbers are available on the machines where you install the Informatica services.

The following table describes the ports used by Informatica:

<table>
<thead>
<tr>
<th>Port Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Domain port</td>
<td>Port number for the node created during installation.</td>
</tr>
<tr>
<td>Service Manager port</td>
<td>Port number used by the Service Manager on the node. The Service Manager listens for incoming connection requests on this port. Client applications use this port to communicate with the services in the domain. This is the port that the Informatica command line programs use to communicate to the domain. This is also the port for the SQL data service JDBC/ODBC driver. Default is 6006.</td>
</tr>
<tr>
<td>Service Manager shutdown port</td>
<td>Port number that controls server shutdown for the domain Service Manager. The Service Manager listens for shutdown commands on this port. Default is 6008.</td>
</tr>
<tr>
<td>Informatica Administrator port</td>
<td>Port number used by the Administrator tool. Default is 6007.</td>
</tr>
<tr>
<td>Informatica Administrator shutdown port</td>
<td>Port number that controls server shutdown for the Administrator tool. The Administrator tool listens for shutdown commands on this port. Default is 6009.</td>
</tr>
<tr>
<td>Range of ports for application services</td>
<td>Range of port numbers that can be assigned to the application service processes that run on the node. When you create an application service in the domain, the Service Manager assigns the first available port in this range to the service process. At a minimum, the number of ports in the range must be at least twice the number of application service processes that will run on the node. Default is 6013 to 6113.</td>
</tr>
</tbody>
</table>

Note: Services and nodes can fail to start if there is a port conflict. You can update the range of ports for application services after you upgrade.

Create a System User Account

Create a system user account to perform the installation and to run the Informatica service. Verify that the user account that you use to install the Informatica services has write permission on the installation directory.

You can install Informatica with the user account logged in to the machine and run it under another user account. You can create a local account or a domain account to install Informatica or run the Informatica Windows service.

Note: To access a repository on Microsoft SQL Server that uses a Windows trusted connection, create a domain account.

The user accounts require the following permissions to run the installer or to run the Informatica Windows service:

- **Logged in user account.** The user account must be a member of the Administrators group and have the Log on as a service permission. Log in with this user account before you install Informatica.

- **Another user account.** The user account must be a member of the Administrators group and have Log on as a service and Act as operating system permissions. You do not have to log in with this user account before you install Informatica. During installation, you can specify the user account to run the Informatica Windows service.
Configure the UNIX Machine

Before you upgrade the domain and server files, complete the following UNIX tasks:

1. Determine port availability.
2. Create a system user account.

**Note:** Services may fail to start if there is a port number conflict.

Determine Port Availability

The installer sets up the ports for components in the Informatica domain, and it designates the ports to use for application service processes that run on the node where you install Informatica.

You can specify the port numbers to use for the components and a range of port numbers to use for the application services. Or you can use the default port numbers provided by the installer. Verify that the port numbers are available on the machines where you install the Informatica services.

The following table describes the ports used by Informatica:

<table>
<thead>
<tr>
<th>Port Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Domain port</td>
<td>Port number for the node created during installation.</td>
</tr>
<tr>
<td>Service Manager port</td>
<td>Port number used by the Service Manager on the node. The Service Manager listens for incoming connection requests on this port. Client applications use this port to communicate with the services in the domain. This is the port that the Informatica command line programs use to communicate to the domain. This is also the port for the SQL data service JDBC/ODBC driver. Default is 6006.</td>
</tr>
<tr>
<td>Service Manager shutdown port</td>
<td>Port number that controls server shutdown for the domain Service Manager. The Service Manager listens for shutdown commands on this port. Default is 6008.</td>
</tr>
<tr>
<td>Informatica Administrator port</td>
<td>Port number used by the Administrator tool. Default is 6007.</td>
</tr>
<tr>
<td>Informatica Administrator shutdown port</td>
<td>Port number that controls server shutdown for the Administrator tool. The Administrator tool listens for shutdown commands on this port. Default is 6009.</td>
</tr>
<tr>
<td>Range of ports for application services</td>
<td>Range of port numbers that can be assigned to the application service processes that run on the node. When you create an application service in the domain, the Service Manager assigns the first available port in this range to the service process. At a minimum, the number of ports in the range must be at least twice the number of application service processes that will run on the node. Default is 6013 to 6113.</td>
</tr>
</tbody>
</table>

**Note:** Services and nodes can fail to start if there is a port conflict. You can update the range of ports for application services after you upgrade.

Create a System User Account

Create a user account specifically to run the Informatica daemon.

Verify that the user account you use to install Informatica has write permission on the installation directory.
Copy the Installation Directory

Copy the directory of the previous version of Informatica to the machine where you want the new version of Informatica to run. For example, if the previous version of Informatica is installed in C:\Informatica\861, copy the C:\Informatica\861 directory and subdirectories to the new machine.

When you run the upgrade installer, specify the Informatica installation directory on the new machine as the one that you want to upgrade.

Verify Keystore File Name and Location

If the node uses HTTPS, verify that the keystore file is in the default location and that it uses the default file name. If the keystore file uses a different file name or directory, the Administrator tool fails to start after you upgrade the domain.

The default location for the keystore file is <InformaticaInstallationDir>/tomcat/conf. The default file name for the keystore file is Default.keystore.

After you upgrade, you can use infasetup UpdateGatewayNode or UpdateWorkerNode to update the keystore file name and location.
Domain and Server Files Upgrade Overview

Use the server installer to upgrade the server files and domain of a previous version of PowerCenter. The server installer provides a domain upgrade wizard to guide you through the upgrade process.

The upgrade wizard installs Informatica 9.1.0 HotFix 2 in the installation directory you specify. It does not modify the files in the directory of the previous version.

The upgrade wizard reads the domain information from files in the previous version and uses the same settings to configure the domain and server files for Informatica 9.1.0 HotFix 2. It upgrades the tables of the domain configuration repository in the same database as the previous version.

Complete the pre-upgrade tasks before you start the upgrade. Run the installer on all machines that host previous versions of Informatica that you want to upgrade. On Windows, you can upgrade in graphical or silent mode. On UNIX, you can upgrade in graphical, console, or silent mode.

If you want to upgrade Data Transformation Engine and Data Transformation Studio on the same machine, upgrade the client before you upgrade the domain and server files. The client and server upgrades must be 32-bit.

You can upgrade Informatica from a DVD or from the root of the directory where you download the installer files. On Windows, the length of the entire installer directory path, including the zip file name, must be 60 characters or less. On UNIX, use native tar or GNU tar to extract the installer files. The user that runs the installer must have read and write permissions on the installer files directory and execute permissions on install.sh.
Upgrading in Graphical Mode

Use this procedure to upgrade the domain and server files on the same machine. You can upgrade the domain and server files in graphical mode on Windows or UNIX. If you install Informatica on the SUSE Linux Enterprise 11 platform, perform the installation in console mode or silent mode.

To upgrade the domain and server files to another machine and modify the node configuration, see "Upgrading with Changes to the Node Configuration" on page 25.

On Windows, if you encounter problems when you run the install.bat file from the root directory, run the following file:

```<InformaticaInstallationDir>/server/install.exe```

1. Log in to the machine with the same user account that you used to install the previous version.
2. Close all other applications.
3. Begin the upgrade from Windows or UNIX:
   - To begin the upgrade on Windows, run install.bat from the root directory.
   - To begin the upgrade on UNIX, use a shell command line to run install.sh from the root directory, and then select the option for graphical mode installation.
4. Select **Install or upgrade Informatica** and click **Start**.
   If you are upgrading from Informatica 9.1.0, select **Apply HotFix 2 to Informatica 9.1.0**. See the Informatica 9.1.0 HotFix 2 Release Notes for information about applying the hotfix.
5. On the **Installation Type** page, select **Upgrade to Informatica 9.1.0 with HotFix 2** and click **Next**.
   The **Upgrade Pre-Requisites** page displays the upgrade system requirements.
6. Verify the requirements before you continue the upgrade.
7. Click **Next**.
8. On the **Upgrade Directory** page, enter the following directories:

<table>
<thead>
<tr>
<th>Directory</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Directory of the Informatica product to upgrade</td>
<td>Directory that contains the previous version of PowerCenter that you want to upgrade.</td>
</tr>
<tr>
<td>Directory for Informatica 9.1.0 HotFix 2</td>
<td>Directory in which to install Informatica 9.1.0 HotFix 2. Enter the absolute path for the installation directory. The directory cannot be the same as the directory that contains the previous version of PowerCenter. The directory names in the path must not contain spaces or the following special characters: @! $ # % ( ) {} [];&quot;'</td>
</tr>
</tbody>
</table>

On Windows, the installation directory must be on the current machine.
9. Verify that the **Allow changes to the node host name and port numbers** option is not selected.
10. Click **Next**.
    The upgrade wizard displays a warning to shut down the Informatica domain before you continue the upgrade.
11. Click **OK**.
12. On the **Pre-Installation Summary** page, review the upgrade information, and click **Install** to continue.
    The upgrade wizard installs the Informatica server files to the Informatica 9.1.0 HotFix 2 installation directory.
13. If you are upgrading a gateway node, the upgrade wizard displays the database and user account information for the domain configuration repository to be upgraded.
If you are upgrading a worker node, the upgrade wizard does not display the domain configuration repository information. You cannot modify the database connection information.

The following table describes the properties that the installer displays for the domain configuration repository:

<table>
<thead>
<tr>
<th>Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Database type</td>
<td>Database for the domain configuration repository.</td>
</tr>
<tr>
<td>Database user ID</td>
<td>Database user account for the domain configuration repository.</td>
</tr>
<tr>
<td>User password</td>
<td>Password for the database user account.</td>
</tr>
</tbody>
</table>

The upgrade wizard displays the database connection string for the domain configuration repository based on how the connection string of the previous version was created at installation:

- If the previous version used a JDBC URL at installation, the upgrade wizard displays the JDBC connection properties, including the database address and service name.
  Optionally, you can specify additional JDBC parameters to include in the JDBC URL. To provide additional JDBC parameters, select JDBC parameters and enter a valid JDBC parameter string.
- If the previous version used a custom JDBC connection string at installation, the upgrade wizard displays the custom connection string.
  You cannot specify additional JDBC parameters.

14. If you are upgrading a gateway node, the upgrade wizard displays the database and user account information for the domain configuration repository to be upgraded.

If you are upgrading a worker node, the upgrade wizard does not display the domain configuration repository information. You cannot modify the database connection information.

The following table describes the properties that the installer displays for the domain configuration repository:

<table>
<thead>
<tr>
<th>Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Database type</td>
<td>Database for the domain configuration repository.</td>
</tr>
<tr>
<td>Database user ID</td>
<td>Database user account for the domain configuration repository.</td>
</tr>
<tr>
<td>User password</td>
<td>Password for the database user account.</td>
</tr>
</tbody>
</table>

The upgrade wizard displays the database connection string for the domain configuration repository based on how the connection string of the previous version was created at installation:

- If the previous version used a JDBC URL at installation, the upgrade wizard displays the JDBC connection properties, including the database address and service name.
  Optionally, you can specify additional JDBC parameters to include in the JDBC URL. To provide additional JDBC parameters, select JDBC parameters and enter a valid JDBC parameter string.
- If the previous version used a custom JDBC connection string at installation, the upgrade wizard displays the custom connection string.
  You cannot specify additional JDBC parameters.

15. Click **Test Connection** to verify that you can connect to the database, and then click **OK** to continue.

16. Click **Next**.
On Windows, the upgrade wizard creates a service to start Informatica. By default, the service runs under the same user account as the account used for installation. You can run the Windows service under a different user account.

17. Select whether to run the Windows service under a different user account.

The following table describes the properties that you set:

<table>
<thead>
<tr>
<th>Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Run Informatica under a different user account</td>
<td>Indicates whether to run the Windows service under a different user account.</td>
</tr>
<tr>
<td>User name</td>
<td>User account with which to run the Informatica Windows service. Use the following format: DomainName\UserAccount This user account must have the Act as operating system permission.</td>
</tr>
<tr>
<td>Password</td>
<td>Password for the user account with which to run the Informatica Windows service.</td>
</tr>
</tbody>
</table>

18. Click Next.

The Post-Upgrade Summary page indicates whether the upgrade completed successfully.

19. Click Done.

You can view the upgrade log files to get more information about the tasks performed by the upgrade wizard and to view the configuration of installed components.

Upgrading in Console Mode

Use this procedure to upgrade the domain and server files on the same machine. You can upgrade the Informatica domain and server files in console mode on UNIX.

To upgrade the domain and server files to another machine and modify the node configuration, see "Upgrading with Changes to the Node Configuration" on page 25.

When you run the installer in console mode, the words Quit and Back are reserved words. Do not use them as input text.

When the installer starts in console mode, it displays a message that it is preparing for silent mode installation. On Solaris, it displays a message that it cannot find the install.bin file. You can ignore these messages.

1. Log in to the machine with the same user account that you used to install the previous version.
2. Stop all processes that access the directory and subdirectories of the Informatica product to upgrade, including command prompts and tail logs.
3. On a shell command line, run the install.sh file located in the root directory.
   The installer displays the message to verify that the locale environment variables are set.
4. If the environment variables are not set, enter N to exit the installer and set them as required.
   If the environment variables are set, enter Y to continue.
5. Enter 1 to install or upgrade Informatica.
   If you are upgrading from informatica 9.1.0, enter 3 to apply Informatica 9.1.0 HotFix 2. See the Informatica 9.1.0 HotFix 2 Release Notes for information about applying the hotfix.
6. Enter C for console mode installation.
7. Enter 2 to upgrade to Informatica 9.1.0 HotFix 2.
   Review the system requirements and pre-upgrade tasks.
8. Verify the upgrade requirements before you continue.
10. At the prompt, enter the following directories:

<table>
<thead>
<tr>
<th>Directory</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Directory of the Informatica product to upgrade</td>
<td>Directory that contains the previous version of PowerCenter that you want to upgrade.</td>
</tr>
<tr>
<td>Directory for Informatica 9.1.0 HotFix 2</td>
<td>Directory in which to install Informatica 9.1.0 HotFix 2. The directory cannot be the same as the directory that contains the previous version of PowerCenter.</td>
</tr>
</tbody>
</table>

11. Enter 1 to use the same node configuration as the previous version.
    The installer displays a warning to shut down the Informatica domain that you want to upgrade before you continue the upgrade.
12. Press Enter.
13. Review the upgrade information and press Enter to continue.
    The installer copies the server files to the Informatica 9.1.0 Hotfix 2 installation directory.
    The installer displays the database and user account information for the domain configuration repository to upgrade. It displays the database connection string for the domain configuration repository based on how the connection string of the previous version was created at installation:
    ♦ If the previous version used a JDBC URL at installation, the installer displays the JDBC connection properties, including the database address and service name.
    ♦ If the previous version used a custom JDBC connection string at installation, the installer displays the custom connection string.
14. Press Enter.
15. If you use a JDBC URL, you can specify additional parameters to include in the connection string.
    If you use a custom connection string, you cannot specify additional parameters.
    The Post-Installation Summary window indicates whether the upgrade completed successfully. It also shows the status of the installed components and their configuration.
    You can view the upgrade log files to get more information about the upgrade tasks performed by the installer and to view the configuration properties for the installed components.

Upgrading in Silent Mode

Use this procedure to upgrade the domain and server files on the same machine.
To upgrade the domain and server files to another machine and modify the node configuration, see "Upgrading with Changes to the Node Configuration" on page 25.
To upgrade the Informatica services without user interaction, upgrade in silent mode. Use a properties file to specify the upgrade options. The installer reads the file to determine the upgrade options. You can use silent
mode upgrade to upgrade the Informatica services on multiple machines on the network or to standardize the upgrade process across machines.

Copy the Informatica installation files to the hard disk on the machine that hosts the Informatica instance you plan to upgrade.

To upgrade in silent mode, complete the following tasks:
1. Create the upgrade properties file and specify the upgrade options.
2. Run the installer with the upgrade properties file.

Creating the Properties File

Informatica provides a sample properties file that includes the upgrade parameters that are required by the installer. You can customize the sample properties file to specify the options for your upgrade.

The sample upgrade properties file is named SilentInput_upgrade.properties and is located in the root directory of the installation DVD or the installer download location. After you customize the file, save it with the file name SilentInput.properties.

1. Go to the root of the directory that contains the installation files.
2. Find the file named SilentInput_upgrade.properties.
   Back up the file before you modify it.
3. Use a text editor to open the file and modify the values of the upgrade parameters.

The following table describes the upgrade parameters that you can modify:

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>INSTALL_TYPE</td>
<td>Indicates whether to install or upgrade Informatica. If the value is 0, the installer performs a fresh installation of Informatica. If the value is 1, the installer upgrades a previous version of Informatica.</td>
</tr>
<tr>
<td>USER_INSTALL_DIR</td>
<td>Directory in which to install the new version of PowerCenter. The directory cannot be the same as the directory that contains the previous version of PowerCenter.</td>
</tr>
<tr>
<td>UPG_BACKUP_DIR</td>
<td>Directory that contains the previous version of PowerCenter that you want to upgrade.</td>
</tr>
<tr>
<td>DB2_TABLESPACE</td>
<td>For IBM DB2 only. Name of the tablespace in which to create the tables. If this parameter is empty, the installer creates the tables in the default tablespace. In a multi-partition database, the tablespace page size must be 32 K. Define the database in a single-node tablespace to optimize performance.</td>
</tr>
<tr>
<td>ADVANCE_JDBC_PARAM</td>
<td>Optional parameters to include in the JDBC URL connection string. Verify that the parameter string is valid. The installer does not validate the parameter string before it adds the string to the JDBC URL. If this parameter is empty, the installer creates the JDBC URL without additional parameters. You can set this parameter if DB_CUSTOM_STRING_SELECTION=0.</td>
</tr>
<tr>
<td>ADVANCE_PORT_CONFIG</td>
<td>Indicates whether to display the list of port numbers for the domain and node components. If the value is 0, the installer assigns default port numbers to the domain and node components. If the value is 1, you can set the port numbers for the domain and node components.</td>
</tr>
</tbody>
</table>
| TOMCAT_PORT           | Port number used by the Service Manager on the node. The Service Manager listens for incoming connection requests on this port. Client applications use this port to communicate with the services in the domain. This is the port that the Informatica
<table>
<thead>
<tr>
<th>Property Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SERVER_PORT</td>
<td>Port number that controls server shutdown for the domain Service Manager. The Service Manager listens for shutdown commands on this port. You can set this parameter if ADVANCE_PORT_CONFIG=1.</td>
</tr>
<tr>
<td>AC_PORT</td>
<td>Port number used by the Administrator tool. You can set this parameter if ADVANCE_PORT_CONFIG=1.</td>
</tr>
<tr>
<td>AC_SHUTDWN_PORT</td>
<td>Port number that controls server shutdown for the Administrator tool. The Administrator tool listens for shutdown commands on this port. You can set this parameter if ADVANCE_PORT_CONFIG=1.</td>
</tr>
<tr>
<td>FORCE_UPGRADE</td>
<td>For upgrades from version 8.x. You can set this option when you run the installer again after a failed upgrade. The installer starts the domain upgrade process from the beginning and overrides all previous upgrades to the domain. It also overrides any upgrade contention if other administrators are upgrading nodes in the domain at the same time.</td>
</tr>
</tbody>
</table>

4. On Windows, specify whether to run the Informatica service under the same user account as the account used for upgrade.

Set the following parameters:

<table>
<thead>
<tr>
<th>Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>USE_LOGIN_DETAILS</td>
<td>Indicates whether to run the Windows service under a different user account. If the value is 0, the installer configures the service to run under the current user account. If the value is 1, the installer configures the service to run under a different user account.</td>
</tr>
<tr>
<td>WIN_USER_ID</td>
<td>User account with which to run the Informatica Windows service. Use the following format: DomainName\UserAccount. This user account must have the Act as operating system permission.</td>
</tr>
<tr>
<td>WIN_USER_PSSWD</td>
<td>Password for the user account with which to run the Informatica Windows service.</td>
</tr>
</tbody>
</table>

5. Save the properties file with the name SilentInput.properties.

Running the Silent Installer

After you create the properties file, open a command window to start the silent upgrade.

1. Open a command window.
2. Go to the root of the server installer directory.
3. Verify that the directory contains the file SilentInput.properties with the upgrade options.
4. To start the silent upgrade process, double click the file silentinstall.bat.

The silent upgrade runs in the background. The process can take a while. The silent upgrade process is complete when the Informatica_<Version>_Services_InstallLog.log is created in the installation directory.

The silent upgrade fails if you incorrectly configure the properties file or if the installation directory is not accessible. If the upgrade fails, view the silent upgrade log file and correct the errors. Then run the silent installer.
The silent upgrade log file name is silentErrorLog.log. The installer creates it in the root directory on Windows and in the user home directory on UNIX.

### Upgrading with Changes to the Node Configuration

The installer provides the option to allow changes to the node host name and port numbers. Select this option to upgrade the server files and change the configuration the node.

Complete the pre-upgrade tasks before you run the installer. On Windows, you can run the installer in graphical or silent mode. On UNIX, you can run the installer in graphical, console, or silent mode.

### Upgrading in Graphical Mode

Use this procedure to upgrade the domain and server files to another machine and modify the node configuration. To upgrade the domain and server files on the same machine, see “Upgrading in Graphical Mode” on page 19.

You can upgrade the Informatica domain and server files in graphical mode on Windows or UNIX. If you upgrade Informatica on the SUSE Linux Enterprise 11 platform, perform the upgrade in console mode or silent mode.

On Windows, if you encounter problems when you run the install.bat file from the root directory, run the following file:

```
<InformaticaInstallationDir>/server/install.exe
```

1. Log in to the machine with the same user account that you used to install the previous version.
2. Close all other applications.
3. Begin the upgrade from Windows or UNIX:
   - To begin the upgrade on Windows, run install.bat from the root directory.
   - To begin the upgrade on UNIX, use a shell command line to run install.sh from the root directory, and then select the option for graphical mode installation.
4. Select **Install or upgrade Informatica** and click **Start**.
   If you are upgrading from Informatica 9.1.0, select **Apply HotFix 2 to Informatica 9.1.0**. See the Informatica 9.1.0 HotFix 2 Release Notes for information about applying the hotfix.
5. On the **Installation Type** page, select **Upgrade to Informatica 9.1.0 with HotFix 2** and click **Next**.
   The **Upgrade Pre-Requisites** page displays the upgrade system requirements.
6. Verify the requirements before you continue the upgrade.
7. Click **Next**.
8. On the **Upgrade Directory** page, enter the following directories:

<table>
<thead>
<tr>
<th>Directory</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Directory of the Informatica product to upgrade</td>
<td>Directory that contains the previous version of PowerCenter that you want to upgrade.</td>
</tr>
<tr>
<td>Directory for Informatica 9.1.0 HotFix 2</td>
<td>Directory in which to install Informatica 9.1.0 HotFix 2. Enter the absolute path for the installation directory. The directory cannot be the same as the directory that contains the previous version of PowerCenter. The directory names in the path must not contain spaces or the following special characters: @ * $ ! % ( ) { } [ ] , ; '</td>
</tr>
</tbody>
</table>

---

Upgrading with Changes to the Node Configuration 25
9. Select **Allow changes to the node host name and port numbers**.
   Use this option to change the configuration of the Informatica product that you upgrade. If you are upgrading to a different machine, you can change the node configuration to match the new machine.

10. Click **Next**.
   The upgrade wizard displays a warning to shut down the Informatica domain before you continue the upgrade.

11. Click **OK**.

12. On the **Pre-Installation Summary** page, review the upgrade information, and click **Install** to continue.
   The upgrade wizard installs the Informatica server files to the Informatica 9.1.0 HotFix 2 installation directory.

13. Click **Test Connection** to verify that you can connect to the database, and then click **OK** to continue.

14. Click **Next**.
   The installer displays the domain and node properties.

15. Modify the node host name and port number to match the configuration of the new version of Informatica.
   The following table describes the domain and node properties that you can specify:

<table>
<thead>
<tr>
<th>Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Domain name</td>
<td>Name of the domain. The default domain name is Domain_&lt;MachineName&gt;. The name must not exceed 128 characters and must be 7-bit ASCII only. It cannot contain a space or any of the following characters: ` % * + ; &quot; ? , &lt; &gt; /</td>
</tr>
<tr>
<td>Node name</td>
<td>Name of the node that you are upgrading.</td>
</tr>
<tr>
<td>Node host name</td>
<td>Host name of the machine that hosts the node you are upgrading. If the machine has a single network name, use the default host name. If the machine has multiple network names, you can modify the default host name to use an alternate network name. Optionally, you can use the IP address. Note: Do not use localhost. The host name must explicitly identify the machine.</td>
</tr>
<tr>
<td>Node port number</td>
<td>Port number for the node you are upgrading. The default port number for the node is 6005.</td>
</tr>
<tr>
<td>Gateway node host name</td>
<td>Host name of the machine that hosts the gateway node for the domain. Available if you upgrade a worker node.</td>
</tr>
<tr>
<td>Gateway node port number</td>
<td>Port number of the gateway node. Available if you upgrade a worker node.</td>
</tr>
</tbody>
</table>

16. If you are using a custom keystore file and you are upgrading to a different gateway node configuration, specify the custom keystore file password and location.
The following table describes the properties for the custom keystore file password and location:

<table>
<thead>
<tr>
<th>Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Custom Keystore Password</td>
<td>Plain text password for the custom keystore file.</td>
</tr>
<tr>
<td>Custom Keystore File</td>
<td>Path and file name of the custom keystore file. If you leave this field blank, the installer looks for the keystore file in the following directory: <code>&lt;InformaticaInstallationDir&gt;\server\tomcat\conf\</code></td>
</tr>
</tbody>
</table>

17. Click Next.

On the Port Configuration Upgrade page, the upgrade wizard displays the port numbers assigned to the domain and node components.

18. You can specify new port numbers or use the default port numbers.

The following table describes the ports that you can specify:

19. Click Next.

On Windows, the upgrade wizard creates a service to start Informatica. By default, the service runs under the same user account as the account used for installation. You can run the Windows service under a different user account.

20. Select whether to run the Windows service under a different user account.

The following table describes the properties that you set:

<table>
<thead>
<tr>
<th>Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Run Informatica under a different user account</td>
<td>Indicates whether to run the Windows service under a different user account.</td>
</tr>
<tr>
<td>User name</td>
<td>User account with which to run the Informatica Windows service. Use the following format: &lt;DomainName&gt;UserAccount. This user account must have the Act as operating system permission.</td>
</tr>
<tr>
<td>Password</td>
<td>Password for the user account with which to run the Informatica Windows service.</td>
</tr>
</tbody>
</table>

21. Click Next.

The Post-Upgrade Summary page indicates whether the upgrade completed successfully.

22. Click Done.

You can view the upgrade log files to get more information about the tasks performed by the upgrade wizard and to view the configuration of installed components.

**Upgrading in Console Mode**

Use this procedure to upgrade the domain and server files to another machine and modify the node configuration.

To upgrade the domain and server files on the same machine, see “Upgrading in Console Mode” on page 21.

You can upgrade the Informatica domain and server files in console mode on UNIX.

When you run the installer in console mode, the words Quit and Back are reserved words. Do not use them as input text.
When the installer starts in console mode, it displays a message that it is preparing for silent mode installation. On Solaris, it displays a message that it cannot find the install.bin file. You can ignore these messages.

1. Log in to the machine with the same user account that you used to install the previous version.
2. Stop all processes that access the directory and subdirectories of the Informatica product to upgrade, including command prompts and tail logs.
3. On a shell command line, run the install.sh file located in the root directory.
   The installer displays the message to verify that the locale environment variables are set.
4. If the environment variables are not set, enter N to exit the installer and set them as required.
   If the environment variables are set, enter Y to continue.
5. Enter 1 to install or upgrade Informatica.
   If you are upgrading from Informatica 9.1.0, enter 3 to apply Informatica 9.1.0 HotFix 2. See the Informatica 9.1.0 HotFix 2 Release Notes for information about applying the hotfix.
6. Enter C for console mode installation.
7. Enter 2 to upgrade to Informatica 9.1.0 HotFix 2.
   Review the system requirements and pre-upgrade tasks.
8. Verify the requirements before you continue the upgrade.
10. At the prompt, enter the following directories:

<table>
<thead>
<tr>
<th>Directory</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Directory of the Informatica product to upgrade</td>
<td>Directory that contains the previous version of PowerCenter that you want to upgrade.</td>
</tr>
<tr>
<td>Directory for Informatica 9.1.0 HotFix 2</td>
<td>Directory in which to install Informatica 9.1.0 HotFix 2. The directory cannot be the same as the directory that contains the previous version of PowerCenter.</td>
</tr>
</tbody>
</table>

11. Enter 2 to allow changes to the node host name and port number.
   The installer displays a warning to shut down the Informatica domain that you want to upgrade before you continue the upgrade.
12. Press Enter.
13. Review the upgrade information and press Enter to continue.
   The installer copies the server files to the Informatica 9.1.0 Hotfix 2 installation directory.
   The installer displays the database and user account information for the domain configuration repository to upgrade. It displays the database connection string for the domain configuration repository based on how the connection string of the previous version was created at installation:
   ♦ If the previous version used a JDBC URL at installation, the installer displays the JDBC connection properties, including the database address and service name.
   ♦ If the previous version used a custom JDBC connection string at installation, the installer displays the custom connection string.
14. Press Enter.
15. If the domain configuration repository is in DB2, you can specify the name of the tablespace.
16. You can specify additional parameters to include in the connection string.
   The installer displays the domain and node properties.
17. Modify the node host name and port number to match the configuration of the new version of Informatica.

The following table describes the domain and node properties that you can specify:

<table>
<thead>
<tr>
<th>Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Domain name</td>
<td>Name of the domain. The default domain name is Domain_&lt;MachineName&gt;. The name must not exceed 128 characters and must be 7-bit ASCII only. It cannot contain a space or any of the following characters: &quot;`% * ; ? &lt; &gt; /</td>
</tr>
<tr>
<td>Node name</td>
<td>Name of the node that you are upgrading.</td>
</tr>
<tr>
<td>Node host name</td>
<td>Host name of the machine that hosts the node you are upgrading. If the machine has a single network name, use the default host name. If the machine has multiple network names, you can modify the default host name to use an alternate network name. Optionally, you can use the IP address. Note: Do not use localhost. The host name must explicitly identify the machine.</td>
</tr>
<tr>
<td>Custom keystore password</td>
<td>Plain text password for the custom keystore file. Enter the custom keystore password if you are using a custom keystore file and you are upgrading to a different gateway node configuration.</td>
</tr>
<tr>
<td>Custom keystore file</td>
<td>Path and file name of the custom keystore file. Enter the custom keystore file if you are using a custom keystore file and you are upgrading to a different gateway node configuration. If you leave this field blank, the installer looks for the keystore file in the following directory: <code>&lt;InformaticaInstallationDir&gt;\server\tomcat\conf</code></td>
</tr>
<tr>
<td>Node port number</td>
<td>Port number for the node you are upgrading. The default port number for the node is 6005.</td>
</tr>
<tr>
<td>Gateway node host name</td>
<td>Host name of the machine that hosts the gateway node for the domain. Available if you upgrade a worker node.</td>
</tr>
<tr>
<td>Gateway node port number</td>
<td>Port number of the gateway node. Available if you upgrade a worker node.</td>
</tr>
</tbody>
</table>

18. The installer displays the port numbers assigned the domain components.

You can specify new port numbers or use the default port numbers.

The following table describes the ports that you can specify:

<table>
<thead>
<tr>
<th>Port</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Service Manager port</td>
<td>Port number used by the Service Manager in the node. Client applications and the Informatica command line programs use this port to communicate to the services in the domain.</td>
</tr>
<tr>
<td>Service Manager shutdown port</td>
<td>Port number that controls server shutdown for the domain Service Manager. The Service Manager listens for shutdown commands on this port.</td>
</tr>
<tr>
<td>Informatica Administrator port</td>
<td>Port number used by the Administrator tool. Available if you upgrade a gateway node.</td>
</tr>
<tr>
<td>Informatica Administrator shutdown port</td>
<td>Port number used by the Administrator tool to listen for shut down commands.</td>
</tr>
</tbody>
</table>
Upgrading in Silent Mode

Use this procedure to upgrade the domain and server files to another machine and modify the node configuration. To upgrade the domain and server files on the same machine, see “Upgrading in Silent Mode” on page 22.

To upgrade the Informatica services without user interaction, upgrade in silent mode. Use a properties file to specify the upgrade options. The installer reads the file to determine the upgrade options. You can use silent mode upgrade to upgrade the Informatica services on multiple machines on the network or to standardize the upgrade process across machines.

Copy the Informatica installation files to the hard disk on the machine that hosts the Informatica instance you plan to upgrade.

To upgrade in silent mode, complete the following tasks:

1. Create the upgrade properties file and specify the upgrade options.
2. Run the installer with the upgrade properties file.

Creating the Properties File

Informatica provides a sample properties file that includes the upgrade parameters that are required by the installer. You can customize the sample properties file to specify the options for your upgrade.

The sample upgrade properties file is named SilentInput_Upgrade_NewConfig.properties and is located in the root directory of the installation DVD or the installer download location. After you customize the file, save it with the file name SilentInput.properties.

1. Go to the root of the directory that contains the installation files.
2. Find the file named SilentInput_Upgrade_NewConfig.properties.
   Back up the file before you modify it.
3. Use a text editor to open the file and modify the values of the upgrade parameters.

The following table describes the upgrade parameters that you can modify:

<table>
<thead>
<tr>
<th>Parameter Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>INSTALL_TYPE</td>
<td>Indicates whether to install or upgrade Informatica.</td>
</tr>
<tr>
<td></td>
<td>To upgrade from a previous version of Informatica, set the value to 1.</td>
</tr>
<tr>
<td>UPG_DIFF_CONFIG</td>
<td>Indicates whether to change the node configuration for the new version of Informatica.</td>
</tr>
<tr>
<td></td>
<td>To upgrade a previous version of Informatica to a different machine configuration, set this parameter to 1.</td>
</tr>
<tr>
<td>USER_INSTALL_DIR</td>
<td>Directory in which to install Informatica the new version of Informatica.</td>
</tr>
<tr>
<td></td>
<td>The directory cannot be the same as the directory that contains the previous version.</td>
</tr>
<tr>
<td>Parameter Name</td>
<td>Description</td>
</tr>
<tr>
<td>----------------</td>
<td>-------------</td>
</tr>
<tr>
<td>UPG_BACKUP_DIR</td>
<td>Directory that contains the previous version of Informatica product that you want to upgrade.</td>
</tr>
<tr>
<td>DB_TYPE</td>
<td>Database for the domain configuration repository. The value can be one of the following databases: - Oracle - MSSQLServer - DB2 - Sybase</td>
</tr>
<tr>
<td>DB_UNAME</td>
<td>Database user account name for the domain configuration repository.</td>
</tr>
<tr>
<td>DB_PASSWD</td>
<td>Password for the database user account.</td>
</tr>
<tr>
<td>DB2_TABLESPACE</td>
<td>For IBM DB2 only. Name of the tablespace in which to create the tables. If this parameter is empty, the installer creates the tables in the default tablespace. In a multi-partition database, the tablespace page size must be 32 K.</td>
</tr>
<tr>
<td>SQLSERVER_SCHEMA_NAME</td>
<td>For Microsoft SQL Server. Name of the schema that will contain domain configuration tables. If this parameter is empty, the installer creates the tables in the default schema.</td>
</tr>
<tr>
<td>TRUSTED_CONNECTION</td>
<td>For Microsoft SQL Server. Indicates whether to connect to Microsoft SQL Server through a trusted connection. If this parameter is empty, the installer uses Microsoft SQL Server authentication. Set this parameter only if you are installing on Windows.</td>
</tr>
<tr>
<td>DB_CUSTOM_STRING_SELECTION</td>
<td>Determines whether to use a JDBC URL or a custom connection string to connect to the domain configuration repository database. If the value is 0, the installer creates a JDBC URL from the database properties you provide. If the value is 1, the installer uses the custom connection string you provide.</td>
</tr>
<tr>
<td>DB_SERVICENAME</td>
<td>Required if DB_CUSTOM_STRING_SELECTION=0. Service name for Oracle and IBM DB2 databases or database name for Microsoft SQL Server.</td>
</tr>
<tr>
<td>DB_ADDRESS</td>
<td>Required if DB_CUSTOM_STRING_SELECTION=0. Host name and port number for the database instance in the format HostName:Port.</td>
</tr>
<tr>
<td>ADVANCE_JDBC_PARAM</td>
<td>You can set this parameter if DB_CUSTOM_STRING_SELECTION=0. Optional parameters to include in the JDBC URL connection string. Verify that the parameter string is valid. The installer does not validate the parameter string before it adds the string to the JDBC URL. If this parameter is empty, the installer creates the JDBC URL without additional parameters.</td>
</tr>
<tr>
<td>DB_CUSTOM_STRING</td>
<td>Required if DB_CUSTOM_STRING_SELECTION=1. Valid custom JDBC connection string.</td>
</tr>
<tr>
<td>DOMAIN_HOST_NAME</td>
<td>Host name of the machine that hosts the node that you are upgrading. If the machine has a single network name, use the default host name. If the machine has multiple network names, you can modify the default host name to use an alternate network name. Optionally, you can use the IP address. Note: Do not use localhost. The host name must explicitly identify the machine.</td>
</tr>
<tr>
<td>DOMAIN_PORT</td>
<td>Port number for the node that you are upgrading.</td>
</tr>
<tr>
<td>GATEWAYNODE_HOST</td>
<td>Required if you upgrade a worker node. Host name of the machine that hosts the gateway node.</td>
</tr>
<tr>
<td>Parameter Name</td>
<td>Description</td>
</tr>
<tr>
<td>----------------------------------------</td>
<td>-----------------------------------------------------------------------------</td>
</tr>
<tr>
<td>GATEWAYNODE__PORT</td>
<td>Required if you upgrade a worker node. Port number for the gateway node.</td>
</tr>
<tr>
<td>CUSTOM_KEYSTORE_FILE_UPGRADE</td>
<td>Path and file name of the custom keystore file. Enter the custom keystore file if you are using a custom keystore file and you are upgrading to a different gateway node configuration. If you leave this field blank, the installer looks for the keystore file in the following directory: <code>&lt;InformaticaInstallationDir&gt;\server\tomcat\conf</code></td>
</tr>
<tr>
<td>CUSTOM_KEYSTORE_PSSWD_UPGRADE</td>
<td>Plain text password for the custom keystore file. Enter the custom keystore password if you are using a custom keystore file and you are upgrading to a different gateway node configuration.</td>
</tr>
<tr>
<td>ADVANCE_PORT_CONFIG</td>
<td>Indicates whether to display the list of port numbers for the domain and node components. If the value is 0, the installer assigns default port numbers to the domain and node components. If the value is 1, you can set the port numbers for the domain and node components.</td>
</tr>
<tr>
<td>TOMCAT_PORT</td>
<td>Port number used by the Service Manager on the node. The Service Manager listens for incoming connection requests on this port. Client applications use this port to communicate with the services in the domain. This is the port that the Informatica command line programs use to communicate to the domain. This is also the port for the SQL data service JDBC/ODBC driver.</td>
</tr>
<tr>
<td>SERVER_PORT</td>
<td>You can set this parameter if ADVANCE_PORT_CONFIG=1. Port number that controls server shutdown for the domain Service Manager. The Service Manager listens for shutdown commands on this port. Default is 6008.</td>
</tr>
<tr>
<td>AC_PORT</td>
<td>Port number used by the Administrator tool.</td>
</tr>
<tr>
<td>AC_SHUTDWN_PORT</td>
<td>Port number that controls server shutdown for the Administrator tool. The Administrator tool listens for shutdown commands on this port.</td>
</tr>
<tr>
<td>FORCE_UPGRADE</td>
<td>For upgrades from version 8.x. You can set this option when you run the installer again after a failed upgrade. The installer starts the domain upgrade process from the beginning and overrides all previous upgrades to the domain. It also overrides any upgrade contention if other administrators are upgrading nodes in the domain at the same time.</td>
</tr>
</tbody>
</table>

4. On Windows, specify whether to run the Informatica service under the same user account as the account used for upgrade.

Set the following parameters:

<table>
<thead>
<tr>
<th>Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>USE_LOGIN_DETAILS</td>
<td>Indicates whether to run the Windows service under a different user account. If the value is 0, the installer configures the service to run under the current user account. If the value is 1, the installer configures the service to run under a different user account.</td>
</tr>
<tr>
<td>WIN_USER_ID</td>
<td>User account with which to run the Informatica Windows service. Use the following format: DomainName\UserAccount</td>
</tr>
</tbody>
</table>
5. Save the properties file with the name SilentInput.properties.

**Running the Silent Installer**

After you create the properties file, open a command window to start the silent upgrade.

1. Open a command window.
2. Go to the root of the server installer directory.
3. Verify that the directory contains the file SilentInput.properties with the upgrade options.
4. To start the silent upgrade process, double click the file silentinstall.bat.

The silent upgrade runs in the background. The process can take a while. The silent upgrade process is complete when the Informatica_<Version>_Services_InstallLog.log is created in the installation directory.

The silent upgrade fails if you incorrectly configure the properties file or if the installation directory is not accessible. If the upgrade fails, view the silent upgrade log file and correct the errors. Then run the silent installer again. The silent upgrade log file name is silentErrorLog.log. The installer creates it in the root directory on Windows and in the user home directory on UNIX.

**Troubleshooting the Domain Upgrade**

If the upgrade does not complete successfully, review log files to determine the cause of the failure. The upgrade log files are in the root of the directory where the new version of Informatica is installed. Review the following log file: Informatica_<Version>_Services_Upgrade.log.

If the upgrade fails, restore the domain configuration repository database from backup and run the installer again.
Before You Upgrade the Application Services

This chapter includes the following topics:

- Pre-Upgrade Tasks, 34
- Configure POSIX Asynchronous I/O, 34
- Configure Informatica Environment Variables, 35
- Configure Locale Environment Variables, 35
- Clear Browser Cache, 36
- Change the Node Configuration, 36

Pre-Upgrade Tasks

Before you upgrade the application services, complete the following tasks:

1. Configure POSIX Asynchronous I/O.
2. Configure Informatica environment variables.
3. Configure locale environment variables.
5. Tasks for changing the node configuration.

Configure POSIX Asynchronous I/O

If you install Informatica on IBM AIX, make POSIX Asynchronous I/O available on any node where you want to run a PowerCenter Integration Service. A PowerCenter Integration Service running on an IBM AIX machine can fail to start if POSIX Asynchronous I/O is not available.
Configure Informatica Environment Variables

You can configure the INFA_DOMAINS_FILE and INFA_HOME environment variables to store the domain and installation location settings.

**INFA_DOMAINS_FILE**

The installer creates a domains.infa file in the Informatica installation directory. The domains.infa file contains the connectivity information for the gateway nodes in a domain, including the domain names, domain host names, and domain host port numbers.

Set the value of the INFA_DOMAINS_FILE variable to the path and file name of the domains.infa file. If you configure the INFA_DOMAINS_FILE variable, you can run infacmd and pmcmd from a directory other than /server/bin.

Configure the INFA_DOMAINS_FILE variable on the machine where you install the Informatica services. On Windows, configure INFA_DOMAINS_FILE as a system variable.

**INFA_HOME**

Use INFA_HOME to designate the Informatica installation directory. If you modify the Informatica directory structure, you need to set the environment variable to the location of the Informatica installation directory or the directory where the installed Informatica files are located.

For example, you use a softlink in UNIX for any of the Informatica directories. To configure INFA_HOME so that any Informatica application or service can locate the other Informatica components it needs to run, set INFA_HOME to the location of the Informatica installation directory.

Configure Locale Environment Variables

Use LANG, LC_CTYPE, or LC_ALL to set the UNIX code page. Verify that the locale setting is compatible with the code page for the repository. If the locale setting is not compatible with the repository code page, you cannot create a repository service.

Different UNIX operating systems require different values for the same locale. The value for the locale variable is case sensitive.

Use the following command to verify that the value for the locale environment variable is compatible with the language settings for the machine and the type of code page you want to use for the repository:

```
lc -a
```

The command returns the languages installed on the UNIX operating system and the existing locale settings.

**Locale on Linux**

All UNIX operating systems except Linux have a unique value for each locale. Linux allows different values to represent the same locale. For example, "utf8," "UTF-8," "UTF8," and "utf-8" represent the same locale on a Linux machine. Informatica requires that you use a specific value for each locale on a Linux machine. Make sure that you set the LANG environment variable appropriately for all Linux machines.

**Locale for Oracle Database Clients**

For Oracle database clients, set NLS_LANG to the locale you want the database client and server to use with the login. A locale setting consists of the language, territory, and character set. The value of NLS_LANG
depends on the configuration. For example, if the value is american_america.UTF8, set the variable in a C shell with the following command:

```
setenv NLS_LANG american_america.UTF8
```

**Clear Browser Cache**

Before you access the Administrator tool, clear the browser cache.

On Windows Internet Explorer, delete the browsing history, including temporary files, cookies, and history. On Mozilla Firefox, clear the offline storage.

If you do not clear the browser cache, the previous Administrator tool URL is not redirected to the latest URL and some menu options may not appear.

**Change the Node Configuration**

If you chose the option to update the node configuration, before you upgrade the application services, you must complete the following additional steps:

1. Install the database client software.
2. Configure the environment variables.
3. Verify that a graphics display server is available.
4. Update port numbers.
5. Verify the location of the node backup directory.
6. Update the keystore file name and location.

**Install the Database Client Software**

Install database client software and configure connectivity on the gateway node and on the nodes that will run the PowerCenter Integration Service and PowerCenter Repository Service processes.

**PowerCenter Integration Service**

Depending on the types of databases that the PowerCenter Integration Service will access, install the following database clients on the machine where the PowerCenter Integration Service runs:

- Oracle client
- IBM DB2 Client Application Enabler (CAE)
- Microsoft SQL Client, with Microsoft OLE DB provider for Microsoft SQL Server
- Sybase Open Client
- Teradata BTEQ client
PowerCenter Repository Service

Based on the repository database, install the following database clients on the machine where the PowerCenter Repository Service runs:

- Oracle client
- IBM DB2 Client Application Enabler (CAE)
- Microsoft SQL Client, with Microsoft OLE DB provider for Microsoft SQL Server

Database Client Environment Variables

Configure database client environment variables on the machines that run the PowerCenter Integration Service and the PowerCenter Repository Service processes. The database client path variable name and requirements depend on the UNIX platform and repository database.

After you configure the database environment variables, you can test the connection to the database from the database client.

The following table describes the database environment variables you need to set in UNIX:

<table>
<thead>
<tr>
<th>Database</th>
<th>Environment Variable Name</th>
<th>Database Utility</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle</td>
<td>ORACLE_HOME PATH</td>
<td>sqlplus</td>
<td>Set to: <code>&lt;DatabasePath&gt;</code>&lt;br&gt;Add: <code>&lt;DatabasePath&gt;/bin</code></td>
</tr>
<tr>
<td>IBM DB2</td>
<td>DB2DIR DB2INSTANCE PATH</td>
<td>db2connect</td>
<td>Set to: <code>&lt;DatabasePath&gt;</code>&lt;br&gt;Set to: <code>&lt;DB2InstanceName&gt;</code>&lt;br&gt;Add: <code>&lt;DatabasePath&gt;/bin</code></td>
</tr>
<tr>
<td>Sybase ASE</td>
<td>SYBASE12 or SYBASE15 SYBASE_ASE SYBASE_OCS PATH</td>
<td>isql</td>
<td>Set to: <code>&lt;DatabasePath&gt;/sybase&lt;version&gt;</code>&lt;br&gt;Set to: `$(SYBASE[12</td>
</tr>
<tr>
<td>Teradata</td>
<td>PATH</td>
<td>bteq</td>
<td>Add: <code>&lt;DatabasePath&gt;/bin</code></td>
</tr>
</tbody>
</table>

Configure Environment Variables

Informatica uses environment variables to store configuration information when it runs the application services and connects to the clients. Configure the environment variables to meet the Informatica requirements. Incorrectly configured environment variables can cause the Informatica domain or nodes to fail to start or can cause connection problems between the Informatica clients and the domain.

To configure environment variables on UNIX, log in with the system user account you used to install Informatica.

Library Path Environment Variables

Configure library path environment variables on the machines that run the PowerCenter Integration Service and PowerCenter Repository Service processes. The library path variable name and requirements depend on the UNIX platform and database.

Solaris and Linux

On Solaris and Linux, configure the LD_LIBRARY_PATH environment variable.
The following table describes the values you set for the LD_LIBRARY_PATH for the different databases:

<table>
<thead>
<tr>
<th>Database</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle</td>
<td>&lt;DatabasePath&gt;/lib</td>
</tr>
<tr>
<td>IBM DB2</td>
<td>&lt;DatabasePath&gt;/lib</td>
</tr>
<tr>
<td>Sybase ASE</td>
<td>&quot;${SYBASE_OCS}/lib:${SYBASE_ASE}/lib:${LD_LIBRARY_PATH}&quot;</td>
</tr>
<tr>
<td>Informix</td>
<td>&lt;DatabasePath&gt;/lib</td>
</tr>
<tr>
<td>Teradata</td>
<td>&lt;DatabasePath&gt;/lib</td>
</tr>
<tr>
<td>ODBC</td>
<td>&lt;CLOSEDODBCHOME&gt;/lib</td>
</tr>
</tbody>
</table>

AIX

On AIX, configure the LIBPATH environment variable.

The following table describes the values you set for the LIBPATH for the different databases:

<table>
<thead>
<tr>
<th>Database</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle</td>
<td>&lt;DatabasePath&gt;/lib</td>
</tr>
<tr>
<td>IBM DB2</td>
<td>&lt;DatabasePath&gt;/lib</td>
</tr>
<tr>
<td>Sybase ASE</td>
<td>&quot;${SYBASE_OCS}/lib:${SYBASE_ASE}/lib:${LIBPATH}&quot;</td>
</tr>
<tr>
<td>Informix</td>
<td>&lt;DatabasePath&gt;/lib</td>
</tr>
<tr>
<td>Teradata</td>
<td>&lt;DatabasePath&gt;/lib</td>
</tr>
<tr>
<td>ODBC</td>
<td>&lt;CLOSEDODBCHOME&gt;/lib</td>
</tr>
</tbody>
</table>

HP-UX

On HP-UX, configure the SHLIB_PATH environment variable.

The following table describes the values you set for the SHLIB_PATH for the different databases:

<table>
<thead>
<tr>
<th>Database</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle</td>
<td>&lt;DatabasePath&gt;/lib</td>
</tr>
<tr>
<td>IBM DB2</td>
<td>&lt;DatabasePath&gt;/lib</td>
</tr>
<tr>
<td>Sybase ASE</td>
<td>&quot;${SYBASE_OCS}/lib:${SYBASE_ASE}/lib:${SHLIBPATH}&quot;</td>
</tr>
<tr>
<td>Informix</td>
<td>&lt;DatabasePath&gt;/lib</td>
</tr>
<tr>
<td>Teradata</td>
<td>&lt;DatabasePath&gt;/lib</td>
</tr>
<tr>
<td>ODBC</td>
<td>&lt;CLOSEDODBCHOME&gt;/lib</td>
</tr>
</tbody>
</table>
Update Port Numbers

To avoid startup failure, update port numbers for service processes and service manager shutdown.

Java Component Variables

Informatica installs the JRE to use with the following Java-based components:

- Custom transformations that use Java
- Java transformations
- PowerExchange for JMS
- PowerExchange for Web Services
- PowerExchange for webMethods

To use these components on AIX64, or HP-UX, configure the library path environment variables to point to the java directory installed with Informatica. Configure these environment variables on machines where the PowerCenter Integration Service process runs.

The following table describes the library paths you configure to use Java-based components:

<table>
<thead>
<tr>
<th>UNIX Platform</th>
<th>Environment Variable Name</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>AIX64</td>
<td>LIBPATH</td>
<td>Set to: /usr/lib:/lib&lt;br&gt;Set to: java/jre/bin&lt;br&gt;Set to: java/jre/bin/classic&lt;br&gt;Set to: /usr/lib:/lib</td>
</tr>
<tr>
<td>HP-UX</td>
<td>SHLIB_PATH</td>
<td>Set to: java/jre/lib/PA_RISC2.0/server&lt;br&gt;Set to: java/jre/lib/PA_RISC2.0&lt;br&gt;Set to: /usr/lib:/lib</td>
</tr>
</tbody>
</table>

Verify that a Graphics Display Server is Available

The gateway nodes on UNIX require a graphics display server to run domain reports in Informatica Administrator. If you do not have a graphics display server, you can install and configure X Virtual Frame Buffer (Xvfb). Xvfb is an X server that renders graphics to virtual memory rather than to a graphics display device.

You can download and install Xvfb for the following operating systems:

- **HP-UX.** Xvfb is part of the HP-UX operating system. Install HP-UX patches and graphical packages to run Xvfb based on when you installed or last patched the operating system. For instructions to run Xvfb on HP-UX, see the following web site:
  

- **AIX and Linux.** Download and install Xvfb. For instructions to run Xvfb on AIX and Linux, see the following web site:
  
  http://publib.boulder.ibm.com/infocenter/lwphelp/v2r5m1/index.jsp?topic=/com.ibm.wcs.ic.doc_2.5.1/install/1.inst_t_lwpsetup_xvfb_on_unix.html

- **Solaris.** You can download Xvfb for Solaris from the following web site:
  
  http://ferret.pmel.noaa.gov/FERRET_1?sep07/FAQ/graphics/Solaris_Xvfb.html

Download and set up Xvfb for Solaris and use the following command to start the virtual frame buffer:

```bash
% /usr/X11R6/bin/Xvfb :1 -screen 0 1152x900x8 &
```

This sends any graphics output going to display 1 to shared memory.

Use the following command to set the current display to use the frame buffer for graphics display in a C shell:

```bash
% setenv DISPLAY :1.0
```
Services can fail to start if there are port conflicts with the service process port numbers. You can configure the minimum and maximum port numbers for service processes in the **Advanced Properties** section of the node **Properties** view.

To update the service process port numbers for a node, configure the following advanced properties:

- Minimum Port Number
- Maximum Port Number

**Verify the Node Backup Directory**

Verify that the backup directory for the node is accessible by the node. View the **Backup Directory** configuration in the **Advanced Properties** section of the node **Properties** view.

**Update Keystore File Name and Location**

If the node uses HTTPS and you moved the keystore file or renamed the keystore file before you upgraded the domain, you can update the file name and location to match your previous configuration.

Use `infasheet UpdateGatewayNode` or `UpdateWorkerNode` to update the keystore file name and location.

**Configure PowerExchange Adapters**

If your previous installation included PowerExchange adapters, configure the PowerExchange adapters on the machine that runs the new version of Informatica. If the PowerExchange adapter has an installer, re-install the PowerExchange adapter.
CHAPTER 5

Application Service Upgrade

This chapter includes the following topics:
- Application Service Upgrade Overview, 41
- Service Upgrade Wizard, 41

Application Service Upgrade Overview

The product and product version determines the service upgrade process.

Some service versions require a service upgrade. When you upgrade a service, you must also upgrade the dependent services.

Use the service upgrade wizard, the actions menu of each service, or command line to upgrade services. The service upgrade wizard upgrades multiple services in the appropriate order and checks for dependencies. If you use the command line to upgrade services, you must upgrade services in the correct order and verify that you upgrade dependent services.

After you upgrade a service, you must restart the service.

The first time you enable the Metadata Manager Service after you upgrade it, the service takes a long time to start.

Service Upgrade for PowerCenter 9.0.1

You must upgrade the Metadata Manager Service.

A user with the Administrator role on the domain can upgrade the Metadata Manager Service.

Before you upgrade a Metadata Manager Service, verify that the service is disabled.

Service Upgrade Wizard

Use the service upgrade wizard to upgrade services.

The service upgrade wizard provides the following options:
- Upgrade multiple services.
- Enable services before the upgrade.
- Display upgraded services in a list along with services that require an upgrade.
• Save the current or previous upgrade report.
• Automatically restart the services after they have been upgraded.

You can access the service upgrade wizard from the Manage menu in the header area.

Upgrade Report

The upgrade report contains the upgrade start time, upgrade end time, upgrade status, and upgrade processing details. The Services Upgrade Wizard generates the upgrade report.

To save the upgrade report, choose one of the following options:

Save Report

The Save Report option appears on step 4 of the service upgrade wizard.

Save Previous Report

The second time you run the service upgrade wizard, the Save Previous Report option appears on step 1 of the service upgrade wizard. If you did not save the upgrade report after upgrading services, you can select this option to view or save the previous upgrade report.

Running the Service Upgrade Wizard

Use the service upgrade wizard to upgrade services.

1. In the Informatica Administrator header area click Manage > Upgrade.
2. Select the objects to upgrade.
3. Optionally, specify if you want to Automatically recycle services after upgrade. If you choose to automatically recycle services after upgrade, the upgrade wizard restarts the services after they have been upgraded.
4. Click Next.
5. If dependency errors exist, the Dependency Errors dialog box appears. Review the dependency errors and click OK. Then, resolve dependency errors and click Next.
6. Enter the repository login information. Optionally, choose to use the same login information for all repositories.
7. Click Next. The service upgrade wizard upgrades each service and displays the status and processing details.
8. When the upgrade completes, the Summary section displays the list of services and their upgrade status. Click each service to view the upgrade details in the Service Details section.
9. Optionally, click Save Report to save the upgrade details to a file. If you choose not to save the report, you can click Save Previous Report the next time you launch the service upgrade wizard.
10. Click Close.
11. If you did not choose to automatically recycle services after upgrade, restart upgraded services.
Informatica Client Upgrade Overview

Use the client installer to upgrade a previous version of the Informatica client tools. The Informatica 9.1.0 client tools are installed on the installation directory you specify. The client installer configures the newly installed client tools with the same settings as the previous version. The client installer does not modify the files of the previous version of the client tools.

Complete the pre-upgrade tasks before you start the upgrade. Run the installer on all machines that host previous versions of the Informatica client tools that you want to upgrade. You can upgrade the Informatica clients in graphical or silent mode.

When you run the client installer, select the Informatica client tool to upgrade.

For PowerCenter, you can upgrade the PowerCenter Client tools. PowerCenter Client is a set of tools you can use to manage the PowerCenter repository, mappings, and sessions. The client upgrade also upgrades the following client tools:

- Custom Metadata Configurator
- Mapping Architect for Visio
- Mapping Analyst for Excel

By default, the when you upgrade PowerCenter Client, the following components are also upgraded:

- DataDirect ODBC drivers
- Java Runtime Environment libraries

Upgrade the Informatica client tools from a DVD or from the root of the directory where you download the installer files. On Windows, the length of the entire installer directory path, including the zip file name, must be 60 characters or less.
Informatica Client Upgrade Options

You can upgrade the Informatica client tools in one of the following ways:

- Upgrade in Graphical Mode. Upgrades the Informatica client tools in graphical mode. The installer guides you through the upgrade process.
- Upgrade in Silent Mode. Upgrades the Informatica client tools using a properties file that contains the upgrade options.

Upgrading in Graphical Mode

If you encounter problems when you run the install.bat file from the root directory, run the following file:

```
<InformaticaInstallationDir>/client/install.exe
```

1. Close all applications.
2. Run install.bat from the root directory.
3. Select Install or Upgrade Informatica and click Start.
4. On the Installation Type page, select Upgrade to Informatica 9.1.0 Clients with HotFix 2 and click Next.
5. On the Upgrade Pre-Requisites page, verify the system requirements before you continue the installation and click Next.
6. On the Select Client Tool Selection page, select the Informatica client you want to upgrade.
   You can upgrade the following Informatica client applications:
   - Informatica Developer
   - PowerCenter Client
7. Click Next.
8. On the Select Directory page, enter the following directories:

<table>
<thead>
<tr>
<th>Directory</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Directory of the Informatica client to upgrade</td>
<td>Directory that contains the previous version of the Informatica client tool that you want to upgrade.</td>
</tr>
<tr>
<td>Directory for the Informatica 9.1.0 HotFix 2 client tools</td>
<td>Directory in which to install the Informatica 9.1.0 HotFix 2 client tools. Enter the absolute path for the installation directory. The installation directory must be on the current machine. The directory names in the path must not contain spaces or the following special characters: @</td>
</tr>
</tbody>
</table>
9. Click Next.
10. On the Pre-Installation Summary page, review the installation information and click Install.
    The installer copies the Informatica client files to the installation directory.
11. On the Post-installation Summary page, verify whether the upgrade completed successfully and click Done.
    You can view the installation log files to get more information about the upgrade tasks performed by the installer.
Upgrading in Silent Mode

To upgrade the Informatica client tools without user interaction, upgrade in silent mode. Use a properties file to specify the upgrade options. The installer reads the file to determine the upgrade options. You can use silent mode upgrade to upgrade the Informatica client tools on multiple machines on the network or to standardize the upgrade process across machines.

Copy the Informatica installation files to the hard disk on the machine that hosts the Informatica client you plan to upgrade.

To upgrade in silent mode, complete the following tasks:
1. Create the upgrade properties file and specify the upgrade options.
2. Run the installer with the upgrade properties file.

Creating the Properties File

Informatica provides a sample properties file that includes the upgrade parameters that are required by the installer. You can customize the sample properties file to specify the options for your upgrade.

The sample properties file is named SilentInput.properties and is located in the root of the client installer directory.

1. Go to the root of the directory that contains the client installation files.
2. Locate the file named SilentInput.properties.
   Back up the file before you modify it.
3. Use a text editor to open the file and modify the values of the upgrade parameters.
   The following table describes the upgrade parameters you can modify:

<table>
<thead>
<tr>
<th>Property Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>INSTALL_TYPE</td>
<td>Indicates whether to install or upgrade the Informatica client tools.</td>
</tr>
<tr>
<td></td>
<td>To upgrade from a previous version of Informatica, set the value to 1.</td>
</tr>
<tr>
<td>UPG_BACKUP_DIR</td>
<td>Directory of the previous version of the Informatica tools that you want to</td>
</tr>
<tr>
<td></td>
<td>upgrade.</td>
</tr>
<tr>
<td>USER_INSTALL_DIR</td>
<td>Directory in which to install the new version of the Informatica client tools.</td>
</tr>
<tr>
<td>DXT_COMP</td>
<td>Indicates whether to install Informatica Developer.</td>
</tr>
<tr>
<td></td>
<td>If the value is 1, the Developer tool will be installed. If the value is 0,</td>
</tr>
<tr>
<td></td>
<td>the Developer tool will not be installed. Default is 1.</td>
</tr>
<tr>
<td>CLIENT_COMP</td>
<td>Indicates whether to install the PowerCenter Client.</td>
</tr>
<tr>
<td></td>
<td>If the value is 1, the PowerCenter Client will be installed. If the value is</td>
</tr>
<tr>
<td></td>
<td>0, the PowerCenter Client will not be installed. Default is 1.</td>
</tr>
<tr>
<td>DT_COMP</td>
<td>Indicates whether to install the Data Transformation Studio.</td>
</tr>
<tr>
<td></td>
<td>If the value is 0, the Data Transformation Studio will not be installed.</td>
</tr>
<tr>
<td></td>
<td>Default is 1. Set this value to 0.</td>
</tr>
<tr>
<td>NEW_ECLIPSE_SELECTION</td>
<td>You can set this parameter if DT_COMP=1. Indicates whether to install the</td>
</tr>
<tr>
<td></td>
<td>copy of Eclipse that is bundled with the installer or use an Eclipse</td>
</tr>
<tr>
<td></td>
<td>development environment that is already installed on your machine.</td>
</tr>
<tr>
<td></td>
<td>If the value is 0, the installer uses the Eclipse development environment</td>
</tr>
<tr>
<td></td>
<td>that is already installed on your machine. Set the ECLIPSE_LOCATION property.</td>
</tr>
</tbody>
</table>

Upgrading in Silent Mode       45
4. Save the properties file.

## Running the Silent Installer

After you create the properties file, open a command window to start the silent upgrade.

1. Open a command window.
2. Go to root of the client installer directory.
3. Verify that the directory contains the file SilentInput.properties with the upgrade options.
4. To start the silent upgrade process, double click the file silentinstall.bat.

The silent upgrade runs in the background. The process can take a while. The silent upgrade process is complete when the Informatica_<Version>_Client_InstallLog.log is created in the installation directory.

The silent upgrade fails if you incorrectly configure the properties file or if the installation directory is not accessible. If the upgrade fails, view the installation log files and correct the errors. Then run the silent installer again.
CHAPTER 7

After You Upgrade

This chapter includes the following topics:

- Informatica Domain, 47
- Metadata Manager Service, 48
- Grant Permissions, 49

Informatica Domain

After you upgrade, complete the post-upgrade tasks for the domain.

Configure LDAP Connectivity

If the domain uses LDAP authentication, update the LDAP configuration after you upgrade.

The default maximum size for user import is set to 1000. Previously, the default value was set to 0, which indicated that there was no maximum value.

When you upgrade, all users are imported into the domain. However, all users over 1,000 will be dropped in reverse alphabetic order the next time the Service Manager synchronizes with the LDAP service directory.

To avoid dropping users, reset the maximum size in the LDAP connectivity configuration.

Update the Log Events Directory

When you upgrade the domain, the log events directory points to the location you specified in the previous version. When you upgrade the domain with changes to the node configuration, the log events directory points to the `isp/logs` directory in the new installation directory.

To use a different directory for the logs, update the Log Directory Path property for the domain in the Administrator tool. You can also use `infasetup updateGatewaynode` to update the directory. For example, you can configure the log events directory as the `server/infa_shared/logs` directory in the new installation directory.

Update ODBC Data Sources

The Informatica installation includes DataDirect ODBC drivers. Re-create each ODBC data source to use the new drivers.
Update Statistics for the Domain Configuration Repository

If the domain configuration repository is in an IBM DB2 9.1 database, run the DB2 reorgchk command to optimize database operations. The reorgchk command generates the database statistics used by the DB2 optimizer in queries and updates.

Use the following command:

```
REORGCHK UPDATE STATISTICS on SCHEMA SchemaName
```

Metadata Manager Service

After you upgrade, complete the post-upgrade tasks for each Metadata Manager Service. Before you perform the post-upgrade tasks, disable the Metadata Manager Service. After you perform the post-upgrade tasks, enable the Metadata Manager Service.

Copy JDBC drivers for Netezza Resources

If Metadata Manager uses a Netezza resource to extract metadata from Netezza, copy the Netezza JDBC drivers to the Informatica installation directory.

Copy nzjdbc.jar from the Netezza JDBC driver installation folder to the following directory:

```
<InformaticaInstallationDir>\services\MetadataManagerService\mmapps\mm\WEB-INF\lib.
```

Reload Metadata Manager Resources

Reload all relational database resources, PowerCenter resources, business intelligence resources, and data modeling resources.

For DB2 resources, purge the resources and reload them.

Update the Metadata Manager Properties File

Update the imm.properties file to include any customization.

Compare the imm.properties file in the previous installation directory with the 9.1.0 version. Update the 9.1.0 version of the imm.properties file as required.

The 9.1.0 version of the imm.properties file is in the following directory:

```
<9.1.0 InformaticaInstallationDir>\tomcat\shared\class
```

The 9.0.1 version of the imm.properties file is in the following directory:

```
<9.0.1 InformaticaInstallationDir>\tomcat\shared\class
```

The changes take effect when you enable the Metadata Manager Service.

Update the Metadata Manager File Location

When you upgrade, the Metadata Manager file location points to the location you specified in the previous version.

To use a different directory for the files, update the Metadata Manager File Location property for the Metadata Manager Service in the Administrator tool.
Configure Domain SMTP Configuration Settings

You use the Administrator tool to configure the host name and port number of the outgoing mail server in the domain SMTP configuration settings. Metadata Manager uses the mail server that you configure to send email from Metadata Manager.

In previous versions, you configured the host name and port number of the outgoing mail server in the imm.properties file. After you upgrade, use the Administrator tool to configure the email properties in the domain SMTP configuration settings.

Grant Permissions

Grant the necessary permissions to the folders in the Informatica installation directory.

PowerCenter

Grant the Execute permission on the following folders in the `<InformaticaInstallationDir>/tools/pctools` directory:

- 8.6.1
- 9.0.1
- 9.1.0

If the folders do not have the Execute permission, you cannot export mapping specifications from the Analyst tool to PowerCenter.

Reporting and Dashboards Service

Grant the Execute permission on all the files in the `<InformaticaInstallationDir>/jasperreports-server-4.0.1-bin` folder if the server is installed on one of the following platforms:

- AIX 64-bit
- HP-UX 64-bit
- Solaris 64-bit
- Linux 64-bit
- Linux 86-bit

To grant the Execute permission on all the files, go to the `<InformaticaInstallationDir>/jasperreports-server-4.0.1-bin` folder and run the following command:

```
chmod -R 775 *
```
