This document contains important information about known limitations and third-party limitations for Data Integration. For limitations regarding a connector, see the connector release notes.

For information about new features and enhancements, see *What's New*.

Fixed limitations

The following table lists the limitations in the Spring 2018 release that are fixed in this release:

CR	Description
IF-14894	The user details page in Administrator lists the identity provider as "Native" for users that are authenticated through a third-party identity provider using SAML authentication.
IF-14112	In Internet Explorer, the time stamps displayed in the Monitor service and on the My Jobs page in Data Integration appear in Coordinated Universal Time (UTC).
IF-12819	During import, some assets might import successfully while other assets do not. If an error occurs during an import operation, only the assets that were processed before the error occurs will import successfully. The same error message might display for some or all of the failed assets.
IF-10941	The walkthroughs on the Help menu are not available in Japanese.
IF-8251	You must enter Latin alphanumeric characters in text boxes when you create or edit mass ingestion tasks. If you enter symbols or non-Latin character in a text box, for example, if you enter Japanese characters, you cannot save the task.

For information about new features and enhancements, see *What's New*.

Known limitations

The following table describes general Informatica Intelligent Cloud Services Data Integration known limitations in this release:

CR	Description
IF-15335	When you create a new task, the default location might not be as expected.
IF-15206	When you map a target field to a target table column whose name includes a special character such as #, the mapping validates successfully but the mapping task fails.
IF-15205	In a mapping, when you connect an upstream transformation to a target that has spaces or special characters in the field names, Data Integration might display an error message saying, "The following field names are not valid...", but the message does not list the invalid field names.
IF-15159	In a mapping, when you connect an upstream transformation to an Oracle target that has special characters, spaces, all lower-case characters, or mixed-case characters in the target object name, Data Integration might display a "table or view does not exist" or "SQL command not properly ended" error.
IF-14622	When you delete a task that is running, the job is left in an indeterminate state. Do not delete a task while it runs or while a taskflow that uses the task runs.
IF-8245	The Informatica Intelligent Cloud Services REST API does not support the usergroup and permission resources.
DMT-66	A mapping that includes the SIN masking technique fails when you disable the property Start Digit. Workaround: Enable the property Start Digit and enter a start digit value when you use the SIN masking technique.
DMT-54	When you search for and add fields from the Add Fields window of the data masking transformation properties, the transformation clears fields that you selected. Workaround: Scroll down if needed and select required fields instead of searching for fields.
CTDM-366	A masking task fails when you configure a postprocessing expression. Workaround: Remove the postprocessing expression and run the task again.
CTDM-319	You cannot configure expressions for additional master-detail type relationship fields in the target connection. Workaround: Hide or delete the master-detail type relationship fields in the Salesforce target.
CTDM-255	A masking task fails if the task contains objects with self-reference relationships and if the task uses the lookup based reconciliation strategy. Workaround: Use the external ID reconciliation strategy, or remove self-reference relationships from the task.
CTDM-208	A masking task fails when the task contains a single object with self-reference relationships. Workaround: Add more objects in the source, or remove the self-reference relationships from the source. Run the task again.

Informatica Global Customer Support

You can contact a Customer Support Center by telephone or online.

For online support, click **Submit Support Request** in Informatica Intelligent Cloud Services. You can also use Online Support to log a case. Online Support requires a login. You can request a login at <https://network.informatica.com/welcome>.

The telephone numbers for Informatica Global Customer Support are available from the Informatica web site at <https://www.informatica.com/services-and-training/support-services/contact-us.html>.
